

Your pet has received a personal Bioscan test.

**Bioscan** is a computerized bio-energetic test. It utilizes a computer-based instrument to measure the body's energy through DNA (saliva/hair sample) or acupuncture points to identify imbalances in the body. The unique computer program assesses the body as a whole, not just individual organs and systems. It can detect risks of disorder development, early stages of disease, or a current disease. This technology bridges the gap between Western diagnostics and holistic medicine.

Bioscan can assist in identifying the following health risks for your pet.

- Parasites: (worms, mites, protozoa, other).
- Bloodborne bacteria: (tick diseases, underlying infections, immunosuppressive diseases).
- Molds and fungi: (Blastomycosis, environmental molds, Cryptococcus, and others).
- Skin problems: (allergies, rashes, infections).
- Digestive issues: (constipation, IBD, food sensitivities, colitis, other).
- Pain: (back, joints, arthritis, injury, trauma)
- Emotional: (anxiety, depression, grief, aggression)
- Respiratory: (sinuses, post-nasal drip, cough, asthma)
- Endocrine and immunosuppressive diseases.

Your pet was tested for the following by using Bioscan technology:

---

Bioscan technology aims to screen for potential health issues and identify areas of disease to make individualized health recommendations for your pet. Your pet's areas of concern identified on the BioScan are as follows:

1. \_\_\_\_\_
2. \_\_\_\_\_
3. \_\_\_\_\_

Individualized health plan for your pet:

1. Homeopathic: \_\_\_\_\_
2. Other meds: \_\_\_\_\_
3. Recheck: \_\_\_\_\_

The results of the Bioscan can assist in nutritional, homeopathic, and other medical prevention and treatment recommendations. These recommendations help the veterinarian establish a customized treatment protocol to bring your pet's body back into balance. Follow-up testing on your pet is often recommended to monitor your pet's progress.
